

Shortcut of the day: Ctrl + S - Save File

Howdy,

Shortcut of today is

Ctrl + S

It's time for something straightforward ? **Save** your work, be it a document or a file. Take notice that this command normally overwrites the file/saves it under the same name/location as opposed **Ctrl + Shift + S** which normally acts as a **Save As** command and opens a save dialog for you to name your file and choose a path.

That's it!

Do let us know if you have programs that behave differently when using this shortcut.
