

Shortcut of the day: Ctrl + T - New Tab

Shortcut of today is

Ctrl + T

It is used most often to open a new **Tab** in your browser. It also allows you to handle indentation in your word processor. Should you want to revert closing a tab in your browser or even set a smaller indent there's a related shortcut for that: **Ctrl + Shift + T**.

If there are more actions for this let us know below.

Good luck.
